PROFILE

I develop Flutter applications for iOS, Android, Windows, and macOS. I work with legacy code, design module architecture, and implement complex integrations: streaming AI chats, media, and payments. I take tasks from requirements analysis through release and contribute to code reviews and mentoring.

Core stack: Dart, Flutter, BLoC / Cubit, Clean Architecture, REST API, Dio, SSE, unit, widget, and integration tests.

COMMERCIAL EXPERIENCE

Regul Web Studio · Middle Flutter Developer

January 2025 - present

Alpina Plus · Alpina publishing group's educational platform

- **Contributed to a two-month migration from Nylo to BLoC.** Independently moved requests and business logic out of screens, separated UI, state management, repositories, and networking, and covered existing behaviour with tests.
- **Optimised heavy screens:** replaced eager list building with ListView.builder, split widgets, and isolated rebuilds with buildWhen / BlocSelector. Verified changes in Flutter DevTools.
- **Restored background audiobook playback** by configuring audio_session. Fixed progress persistence so completed books, audio, and video were correctly marked as read or watched.
- Fixed Deep Links / Universal Links so links opened the app instead of the website. Integrated Yandex MapKit and optimised the map with raster marker icons and clustering.

AlpinaGPT · An AI platform for text, images, and files

- **Implemented character-by-character AI responses over SSE** during generation, with chunk buffering and state management. Restored history and continued displaying the response when returning to chat.
- Implemented PDF, audio, and photo uploads; file and image downloads; and parsing of dynamic backend buttons for AI-image actions. Integrated the payment widget and balance updates after successful payments.
- **Identified recursive token refresh in Dio during a code review.** Fixed it using a separate client without interceptors and synchronisation of concurrent token refresh requests.

EvolverAI · A B2B platform for AI-assisted development

- **Independently designed the Flutter architecture:** feature modules with separate UI, BLoC, repositories, and data access.
- Built project creation and configuration, developer tool connections, AI agent selection, and AI session launch flows. Helped design workflows for project context and repositories.

EXPERIENCE · CONTINUED

Regul Web Studio · Releases, quality, and teamwork

- Prepared builds for four platforms: iOS, Android, Windows, and macOS. Uploaded mobile builds to TestFlight, the App Store, and Google Play, and contributed to Store Review.
- Wrote unit, widget, and integration tests. In AlpinaGPT, an SSE chat test caught a stream-completion regression during refactoring; the CI check blocked the faulty merge. Participated in technical interviews.
- Mentored two Flutter developers: codebase onboarding, task reviews, pair programming, and architecture. After a joint review of layer separation, a colleague independently implemented an image-generation module.
- Combined Flutter development with manual testing: iOS/Android apps and websites for Alpina Plus and AlpinaGPT; desktop only (Windows/macOS) for EvolverAI. Performed functional and smoke testing, wrote test cases, and used DevTools. Tested API requests and imported an API schema in Postman.

XNS · Flutter Developer

March 2023 - December 2024

Chekai · Cashback service | 03.2023 - 08.2023

- Implemented camera-based receipt scanning.
- Built QR code generation and processing for a three-tier referral system; fixed UI bugs.

NDA Recipe App · Recipes and shopping | 09.2023 - 11.2023

- Implemented a cart with item additions, removals, and total recalculation.
- Worked with GetX, GoRouter, search, filters, and empty states.

NDA Fitness App · Workouts and nutrition | 03.2024 - 08.2024

- Built recipe favourites and cardio and strength workout screens.
- Implemented in-workout progress tracking.

TECHNOLOGIES AND PRACTICES

Flutter: Dart, BLoC / Cubit, Provider, GetX, GoRouter, Streams; iOS, Android, Windows, macOS, Web.

Architecture: Clean Architecture, SOLID, OOP, MVVM, Repository Pattern, modular structure.

Integrations: REST API, Dio / HTTP, JSON / DTO, SSE, Firebase Messaging, Deep Links / Universal Links, WebView, Yandex MapKit, camera / QR, audio / video.

Quality and processes: unit, widget, and integration tests, Flutter DevTools, Git, GitHub, GitLab, CI/CD, Figma, code reviews, mentoring. Manual, functional and smoke testing, test cases, DevTools, Postman, API request testing and API schema import.

PERSONAL PROJECTS

Questopia - quest discovery and booking. Flutter, BLoC, Supabase. Code on GitHub Fitoria - workouts, nutrition, and progress. DPS Tracker - a map of road events and notifications. View projects

EDUCATION AND LANGUAGES

2024 - 2028 · Moscow Technical Institute. Applied Informatics, Internet Technologies and Mobile Applications. Studies in progress. 2024 · Omsk Aviation College named after N. E. Zhukovsky. Secondary vocational education in Information Systems and Programming.

2024 · Effective / Omsk State Technical University Digital Department. Flutter course.

Russian: native. English: B1.

COOPERATION PREFERENCES

Remote, full-time; open to business travel. Employment under the Russian Labour Code, self-employed contracting, outstaffing, or project-based work. Desired salary: RUB 145,000 net per month.
